
SERVER-SIDE WEB : MVC PROJECT 2026

Creating an Internet REAL ESTATE Website

Overview

Your company has been contracted to create a real estate application for your client (your team will select the Client's name and identity).

The ASP.Net Core MVC Web Site will allow web users to: Browse Property Listings, View Property features, Select an Agent, Contact an Agent, Book Appointments for Showings, View Showing information and other related tasks). **For this project your team will be working ITERATIVELY & INCREMENTALLY, using the Rational Unified Process:**

- You will be provided with a **Project Phase Plan** that will outline the separate Iterations of the project (but your team will need to plan how to manage each Iteration equally amongst yourselves, before beginning that Iteration).

The work must be divided equally amongst the members of the team (and your instructor can intervene to readjust if they deem an unfair work distribution).

- You will be given use cases and associated documentation that a former analysts created – they have since left the company. You have been told there is some ambiguity in them, and perhaps some details were left out. As a result, you will need to clarify with your clients on a use case by use case basis.
 - If you find out information from the client that adds to or differs from what is in the existing document set...you will need to adjust your approach and receive approval by the client before implementing the modified requirements.
- The completed project iterations must be approved by the end user via a user walkthrough **before** continuing to the next functionality. **Remember, anything that isn't completed in an iteration becomes the top priority in the next iteration.** Walkthrus will generally be performed remotely via MS Teams (in-person walkthrus require prior scheduling). You will be required to schedule the meeting time prior to demonstration of your features.

- Walkthroughs will generally occur on the last day of an iteration, before the next iteration is set to start. However, if a team is feature-complete before then, they may schedule their demonstration early.
- One team member will be recording the user's feedback, while the other will be interacting with the client during the walkthrough (to ensure that all feedback is captured)
- Summary memos of any required changes for that iteration must be submitted to the client as identified throughout the project.

When the final version of the project is complete you must present the working model to the client(s).

- Each team member must participate by demonstrating project features, speaking, and answering questions.
- Practice ahead of time must be evident, and smooth transitions and logical flow are mandatory. Bear in mind that the client has not yet paid for the application, and it will be your job to "sell" them on your product and your company's skill and professionalism.
- Business dress is required for this final presentation.

Note: re: Interviews

• Q&A Sessions (whole group or individual team)	• Verbal interview(s)	• Periodically in class or As Needed by appointment
---	---	--

Important Dates and Requirements

All deliverables are due by 11:59 pm on the date in question unless otherwise specified.

All final Project code and Deliverables must be submitted to Brightspace/GITHUB by 11:59pm on December 6th ...and that version of the code and database is what must be used during the presentation.

DELIVERABLES	FORMAT	DUE DATE
• Member names, development team name, roles, team working guidelines, Team Logo • Name of client company and a paragraph about them (background of the company etc.) • initial logo concept & catch phrase for Real Estate Company	• Word Doc (memo format).	• End of day Monday (10/05/2026)
• Wireframe diagrams (using FIGMA designs) • Since this is a responsive site, wireframes of a phone sized device plus a larger device (tablet or laptop/desktop) will be needed	• Please make a PDF of your wireframe diagrams • Both .pdfs and Figma project are required for submission	• Initial design and layout wireframes should be implemented by Friday (10/09/2026)
• General design Prototype (html, and colour scheme ,basic appearance idea and basic navigation)	• All files Posted to Brightspace and shown to us in a posted video walkthru • Ensure site is well designed and easy to navigate. • Ensure you develop an attractive consistent look and feel • A pdf of the screenshots of your main landing page plus one other example page showing a different layout (can use mock data at this point)	• End of Day (10/14/2026)

Iterations are not equal in length:		- I1 ends: 10/11/2026 - E1 ends: 10/25/2026 - E2 ends: 11/15/2026 - C1 ends: 11/29/2026 - T1 ends: 12/06/2026 - Final Postings/Commits: 12/06/2026 - Presentations: 12/07– 12/11 (2026)
Weekly Status updates (via Written / Video submission)	- Demonstrate what you accomplished that week via a video update demonstration. NOTE: This meeting is a status update (not a product presentation). It must be 5 minutes or less in duration.	Each Friday (via MS Teams channel)
Code Submissions	- All Code & Artifacts will be committed and collaborated via an assigned GITHUB Repo. No other repos will be accepted. - You must merge often to prevent merge conflicts! - The team repository is what needs to be used during user walkthroughs.	- Merge minimum daily - Be sure you pull the latest code for running for user walkthru (and visually demonstrate this at the beginning of your presentation)
User Walkthroughs	- Must be scheduled prior to the iteration end date. - At times you may provide a video walkthrough (via MS Teams) and await our feedback. We will also have live meetings and asking you to share your screen. - Clearly demonstrate that you are using your latest commit (on video or 'live') that is available from the team GitHub repository	Before iteration ends in each instance
