

Business Rules (Up to end of E1) Real Estate System

Business Rules – you must format these and choose the appropriate type and category for the business rules, the date for these can be the project start date. The originator can be the project sponsor (me).

001 – Customer Age Requirement:

A customer must be legal age of majority according to the laws of the province the agency is operating in. Picture driver's license is the required proof of identity and legal age.

005 – Property Listing Expiration process:

Should a listing contract expire with the property still in an 'unsold' state, the property listing is not deleted but is removed from available listings which means it will no longer show up in search results or be permitted to be shown by agents. Customers who own a property that is listed with the Agency should be sent an automatic listing contract renewal email prior to the listing expiry to alert them that the contract is near its end so they may avoid interruption of service. The email will appear to come from their listing agent, although it will be sent from the system. The email should have a link embedded that will allow the customer to renew the contract for another three months. The customer will be required to log in to the website in order to facilitate this renewal.

009 – Personnel Privacy Policy: Personal information of Agency Personnel is not publicized or shared with outside parties. It is kept only for the use of the Agency alone. Social Insurance Number, LoggedInUserName, Street Address, Postal code, Home Phone Number, and date of birth are examples of personal information.

010 – Employment Age Requirement: Employees must be of legal age. Legal age status must be proven at the time of hiring via government issued picture id.

012 – Image Security Policy: All uploaded images must be physically viewed by a human before they are accepted for viewing by the public on the site. By default, a listing or an Agent will have a "Picture Not Available" image that displays temporarily until the images have been approved. Once an image has been viewed and deemed acceptable, it will be placed into the images folder.

013 – Image Upload and Metadata: When an image is to be uploaded, the path that is stored in the database will be the path to where the image will be placed once it has been physically approved. The file name for an agent's image should be the Agent's first name, middle name and last name. The file name for images associated with a listing should be the listing identifier and street address. In all cases, if there are files of the same name uploaded, a number should be appended to ensure unique file names.

017 – Upload Authorization: All staff are permitted to perform image uploads.
